

## D-Derm Aesthetics

### Chemical Peel - Treatment Protocol

You just have received a chemical peel treatment. Due to the nature of these treatments, you should not necessarily expect to “peel.” However, you may have light to moderate flaking in a few localized areas for 3-7 days.

#### **What to Expect:**

Immediately after the treatment - Frosting, redness, puffy eyes, tightness and dryness.  
2-7 Days post peel - Skin may change in color and turn darker than usual, the skin may appear wrinkled (found under the eyes) predominantly in the morning and peeling (light to moderate exfoliation).

#### **Post-Treatment Instructions**

It is recommended that you do not apply make-up the day of the treatment.  
Use a mild gentle cleanser morning and night, rinse w/cool water and pat dry with a clean towel.  
Use Vivier Lexxel or Innoesthetics Skin Repair as often as needed to accelerate healing.  
Use Vivier sun protection SPF 30+
